1 Introduction

The software requirements specification (SRS) should aptly outline the functional requirements of the system to ensure that a third party could develop the functionality to a required degree without further input. Thus, the functional requirements should be precise and extensive to eliminate deviation from the systems goals.

1.1 Purpose

The intended audience of the application includes students of the University of Pretoria, the staff and simple visitors. NavUP can be used by new students who do not know their way around campuses yet, or simply by staff members who want to avoid clustered pathways. It is a tool that will help optimise campus navigation and reduce travel time from one destination to the other.

1.2 Scope

The NavUP system will help users to navigate campuses by allowing users to choose destinations, locate their current location, set up the appropriate path by taking into account human congestion and visually representing said path for the user to follow. NavUP will have a notifications system that will tell the user of events he/she might be interested in. An achievements system will also be in place to award users for walking certain distances or visiting certain locations. NavUP also hopes to incorporate locations with access for the disabled into its maps for those that are in need of such features. It will have a timetable feature that will allow users to create personalised timetables which the system could then use to help them get where they need to when they need to. The system will work offline but will lose some of its online features such as notifications for user interests. Users will also be able to broadcast their location so that others can see them on their maps.

1.3 Definitions, Acronyms and Abbreviations

Table 1: Definitions

SRS	System Requirements Specification
CRUD	Create, Read, Update, Delete
GPS	Global Positioning System
NavUP	Navigation System for UP
UP	University of Pretoria
WiFi	Wireless Fidelity (Technology for wireless local area networking)
EDGE	Enhanced Data for GSM Evolution (slow network found in some buildings)
RAM	Random Access Memory
GUI	Graphical User Interface
Interoperability	The ability of computer systems/software to communicate information effectively
Administrator	User with special permissions in order to manage the system
System	Composition of databases, application, network and other necessary subsystems
Main User	Users that will be registered to make use of the full service/application
Guest User	Unregistered users who make use of the system for a limited period when needed
Location	A specific place/position
Events	Meetings of importance to specific users
Heatmap	Visual representation of traffic congestion using colours that range from cool to hot
Rewards	Virtual incentives upon an achievement
Places of Interest	Locations that a specific user will find meaningful
Leaderboard	Ranks users descending order in terms of most achievements

1.4 References

1.5 Overview

The SRS will help give a detailed representation of the functional requirements and how the elements of the system interact with eachother to achieve NavUp's purpose.

2 Overall Description

2.1 Product Perspective

The main system will be a server on campus that is connected to a database where user's details are stored such as degree, interests and timetable. The user will log into the main system by means of a user friendly GUI provided on the mobile application that sends the user's details to the server over the internet to look at the authenticity and correctness of the provided details. Thereafter the main system will load information about the user and populate the GUI with the relevant information based on the category of the current user be it a student or administrator. The application will then use wifi connections, cell phone towers and GPS to determine the user's position and then triangulate them to the destination class or activity based on these calculations. When administrators update the application or database through the server or the application itself it will notify the user and update the relevant information for the user, for example if a class is cancelled, it will update the user's timetable and notify the user of this update through the GUI as well as push notifications. The map of campus can be loaded onto the mobile application to reduce long term internet usage and only the destination and route to get there will be sent over the network.

2.2 Product Function

- Navigation from and to a location
- Store users timetable to automatically tell user where to go next
- View more information about a specific location
- See upcoming events when at a location or based on users interests
- Reward user for completing challenges
- Update user timetables if classes are cancelled or if there will be a test

2.3 User Characteristics

Four categories of users will be present:

- Guest user: Basic education level is needed as this user will just be making use of the navigation system and search system so a basic technical skill will be needed.
- Main user (student): This user has at least a high school level education and will be using more advanced parts of the system such as setting up a class timetable, looking at and competing in the reward system and managing their profile.
- Administrator / lecturer: This user has at least a high school level education and will need a more advanced technical knowledge as this user will be setting up events, cancelling classes and fixing or updating the system for other users.
- 3rd party Rewards manager: High school level education will be needed as more advanced tasks will be left up to this user such as set up challenges for the other users and include rewards if challenge is completed. An advanced technical knowledge will be needed by this user.

2.4 Constraints

This section describes restrictions on the options that are available when developing the application within feasable regions.

- Connections are limited to different types of networks at different locations. GPS cannot be used within buildings and some buildings lack a strong Wi-Fi signal. Mobile networks may also switch to EDGE in some buildings where faster connections aren't available.
- Application is initially constrained to Android and iOS only.
- Application is designed for approximately 30000 users at any given time which can be seen as a constraint on the number of active users the system can handle.
- The application can experience lengthy response times given that there is a constraint resulting from the capacity of the databases.

2.5 Assumptions and Dependencies

A major assumption of the NavUP system is related to mobile devices. The first assumption relating to this includes the idea that those who require the services rendered by the application will either have a mobile device or have access to one and have a general knowledge of how to use it. It is also assumed that every users mobile device will have enough memory and performance capabilities in order to run the application. Lastly, it is assumed that these devices will have GPS, WiFi and cellular connectivity capabilities built into the device.

3 Specific Requirements

This section expands on the functional requirements of the system. It gives a detailed description of the system and all of its use cases.

3.1 External Interface Requirements

This section provides a detailed description for each interface that composes the system along with other relevant information.

3.1.1 User Interface

- The user interface should initially be a login screen for first time users or logged out users. This login screen will also have the option for new users to register.
- Users should then be able to type in their preferred destination or search via an advanced search method to find a number of different places based on their search criteria.
- A results page will be in the form of a visual map which can be used interactively by the user to view his/her route clearly or to view other places of interest along the way.
- A settings page will be available for users to tweak the application to their needs as well as to update
 personal settings.

3.1.2 Hardware Interface

• Abstract interface via application and database infrastructure not visible to user.

3.1.3 Software Interface

- Application and GPS application communicate in order to receive geographical information.
- Application and database communicate in order to receive information about classes and desired locations.

3.1.4 Communication Interface

• No specific interface implemented. Communication is left to the underlying operating system of the application and portal/database.

3.2 Functional Requirements

This section includes all functional requirements in detail. It includes all use case diagrams, Actor-System interaction diagrams as well as a traceability matrix.

3.2.1 High Level Requirements

- FR-1: The system should have basic navigation functionality
- FR-2: The system should be able to provide and visualise information related to pedestrian traffic
- FR-3: The system should be able to push new information to users based on their preferences and interests
- FR-4: The system should integrate various activities that use location and movement
- FR-5: The system should provide functionality to create, read, update and delete users
- FR-6: The system should allow users to create and manage timetables
- FR-7: The system should allow users to save and share locations
- FR-8: The system should be able to allow users to manage events they are interested in on campus

3.2.2 Use cases

1. Navigation Subsystem

1.1. Get current location

- i. **Description:** The NavUP system must be able to determine a users location at any point in time while the user is on the Hatfield campus. The location must be determined regardless of whether the user is indoors or outdoors.
- ii. Precondition: The user must have an active account and must be within range of WiFi routers.
- iii. Postcondition: The users location is determined and displayed.

1.2. Search location

- i. **Description:** The NavUP system must provide functionality that enables a user to search for any location (lecture hall, day-house, restaurant) on the Hatfield Campus.
- ii. Precondition: The user must have an active account
- iii. **Postcondition:** Matching locations are returned to the user. If no buildings match the search criteria, an appropriate error message is displayed.

1.3. View location details

- i. Description: The NavUP system must allow users to view details related to specific locations. This could include restaurant menus, lecture hall timetable schedules as well as images of the buildings.
- ii. **Precondition:** The user must have an active account and a valid location must be selected on the map.
- iii. Postcondition: Relevant location details shown to user.

1.4. View places of interest

- i. Description: The NavUP system must be able to display places of interests to a user based on their current location. This will include places like restaurants and day-houses that must be displayed in a list form.
- ii. Precondition: The user must have an active account and their current location must be known.
- Postcondition: Relevant places of interest are listed and displayed to the user based on their location.

1.5. Navigate to location

- i. **Description:** The NavUP system must be able to provide directions and navigate to a location given the users current location as well as a desired destination. The system should calculate the most optimal route by looking at the shortest path as well as pedestrian traffic.
- ii. **Precondition:** The user must have an active account. The users current location must be known and the must have specified a destination through the search interface.
- iii. Postcondition: The user is provided with directions from their current location to their desired destination.

1.6. Show pedestrian traffic

- i. **Description:** The NavUP system must be able to display pedestrian traffic on campus in the form of a heatmap. When navigating to a specified location, the system must show traffic on that specific route. A user should also be able to view an overall heatmap of the campus to see traffic.
- ii. **Precondition:** Users must all have the NavUP app installed and must be registered in order for them to show up on the heatmap.
- iii. **Postcondition:** A heatmap of the campus is displayed.

FR-7	3		X				
FR-8	6		X		X		
Use Case Priority		1	3	4	6	2	5

2. Location Management Subsystem

2.1. Save Location

- i. **Description:** The NavUP system must be able to save a location that the user specifies.
- ii. Precondition: User must be logged in if they want to save locations, and be in range of WiFi.
- iii. **Postcondition:** A location will be saved to the users profile.

2.2. View Saved Location

- i. **Description:** The NavUP system must allow users to view locations that the user has saved to their profile.
- ii. Precondition: The user must be logged in and be in range of WiFi.
- iii. Postcondition: None.

2.3. View History

- i. **Description:** The NavUP system should be able to allow users to view their history of locations.
- ii. Precondition: The user must be logged in and be in range of WiFi.
- iii. Postcondition: None.

2.4. Share Location

- i. **Description:** The NavUP system should provide the users with a means to share their current location so as to allow other users to know where they are.
- ii. **Precondition:** The user must be logged in and be in range of WiFi.
- iii. Postcondition: User location is broadcasted for other users to see.

2.5. View Most Visited Locations

- i. **Description:** The NavUP system should have a favourite location section which can then be accessed by the user to view their most visited areas.
- ii. Precondition: The user must be logged in and be in range of WiFi.
- iii. Postcondition: None.

FR-7	3	X	X		X	
FR-8	6			X		
Use Case Priority		1	4	5	2	3

3. User Account Management Subsystem

3.1. Create Profile

- i. **Description:** The NavUP system must be able to provide the user with a means to create their profiles which will then allow them to login to the NavUP application.
- ii. **Precondition:** User must be in range of WiFi.
- iii. Postcondition: A new user account is created.

3.2. Login Function

- i. **Description:** The NavUP system must allow users with a profile to be able to login to said profile and use the NavUP system to the fullest.
- ii. Precondition: User must be in range of WiFi and have an existing NavUP account.
- iii. Postcondition: User is logged in.

3.3. Manage Profile

- i. **Description:** The NavUP system must allow users to manage their own profiles as well as allow administrators to keep track of user profiles.
- ii. Precondition: User must be in range of WiFi and logged in. Admin has no precondition.
- iii. Postcondition: User profile may be altererd.

3.4. Create Timetable

- i. **Description:** The NavUP system should be able to allow users to create their personal timetables.
- ii. Precondition: User must be in range of WiFi and logged in.
- iii. **Postcondition:** Timetable is created on user's profile.

3.5. Manage Timetable

- i. **Description:** The NavUP system must allow users to edit or manage their existing timetables so as to fit their needs. It must also allow administrators to keep track of the users timetable.
- ii. Precondition: User must have existing timetable.
- iii. Postcondition: Timetable is edited on the users profile.

FR-7	3					
FR-8	6					
Use Case P	riority	1	2	3	4	5

4. Entertainment Subsystem

4.1. View events

- i. **Description:** The NavUP system must enable users to view all events that are happening around campus in chronological order. The system should suggest events to a user based on their preferences and most visited locations.
- ii. Precondition: The user must have an active account and must be logged in.
- iii. Postcondition: Various campus-wide events are returned to the user.

4.2. Save event

- i. **Description:** The NavUP system must enable users to save events that they are interested so that they can be viewed later.
- ii. **Precondition:** The user must have an active account, must be logged in and there must be events available to save.
- iii. Postcondition: An event is saved.

4.3. Delete event

- i. Description: The NavUP system must enable a user to delete any saved events
- ii. **Precondition:** The user must have an active account, must be logged in and must have saved events
- iii. Postcondition: A saved event is deleted.

FR-7	3		X	
FR-8	6	X	X	X
Use Case P	riority	1	2	3

5. Achievements Subsystem

5.1. Set Goals

- i. **Description:** The NavUP system must enable users to Set Goals for Achievements created on the system.
- ii. Precondition: An Achievement must be created on the system before Goals can be set for it.
- iii. Postcondition: Every Goal set must be associated with an achievement.

5.2. View Leaderboard

- i. **Description:** The NavUP system will have a leaderboard interface that will showcase the top x users of the system based on the goals and achievements they have completed successfully.
- ii. Precondition: A maximum number of users to view on the leaderboard must be specified.
- iii. Postcondition: None

5.3. Record Steps

- i. Description: The NavUP system must be able to record steps that a user has taken.
- ii. Precondition: The application must be running on their chosen device i.e. not closed.
- iii. **Postcondition:** The application must be able to, at any given moment inform the user of how many steps they have.

5.4. Challenge friend

- i. **Description:** The NavUP system must enable users to interact with other users on the system and challenge them to complete achievements.
- ii. **Precondition:** The users in question must be enrolled on the system.
- iii. Postcondition: The user being challenged must be notified of the challenge and who it is from.

6. Administration Subsystem

6.1. Manage Users

- i. Description: The NavUP system must enable an administrator to add users to the system.
- ii. **Precondition:** User details must be valid and correct (e.g a valid email address)
- iii. **Postcondition:** User must be notified that they have been successfully registered onto the system.

6.2. Manage Locations

- i. **Description:** The NavUP system must enable the administrator to mark important locations on the system. E.g. The CSC is an important location that should be highlighted when using the system.
- ii. Precondition: The user managing the locations must have administrator access.
- iii. Postcondition: None

6.3. Manage Events

- i. **Description:** The NavUP system must enable an administrator to create and publish, update and remove events on the system.
- ii. **Precondition:** The user managing the event must have administrator access.
- iii. Postcondition: All users subscribed to the event must be notified of changes.

6.4. Notify Users

- i. **Description:** The NavUP system must enable an administrator to notify users of various actions being performed on the application.
 - This includes actions such as Publishing events etc.
- ii. Precondition: The users being notified should be subscribers of the event
- iii. Postcondition: None

3.3 Actor-System Interaction Modeling

6.1. Navigation Subsystem

i. Get Current Location

Preconditions:	The user must have an active ac-
	count and must be within range of
	WiFi routers.
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page
1. The user selects the "Naviga-	2. The system displays the Navi-
tion" option	gation page.
3. The user selects the "Get Cur-	4. The system determines the
rent Location" option.	users current location.
	5. The system displays a map on
	which the users current location is
	presented.
Post Conditions:	The users location is determined
	and displayed.

ii. Search Location

Preconditions:	The user must have an active ac-
	count
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page
1. The user selects the "Naviga-	2. The system displays the Navi-
tion" option	gation page.
3. The user selects the "Search Lo-	4. The system displays a search
cation" option.	bar on the screen.
5. The User enters a location	6. The system searches all the
which they would like to search for	registered locations based on the
and press the search button	search term entered by the user.
	7. The system displays a list of lo-
	cations which matched the search
	criteria.
Post Conditions:	Matching locations are returned to
	the user. If no buildings match the
	search criteria, an appropriate er-
	ror message is displayed.

iii. View Location Details

Preconditions	The user must have an active ac-
	count and a valid location must be
	selected on the map.
Actor: User	System: Up Nav
	0. The system displays a list of
	locations from the location search.
1. The user selects one of the loca-	2. The system retrieves informa-
tions from the provided list.	tion related to the location selected
	by the user.
	3. The system displays the loca-
	tion information.
Post conditions	Relevant location details shown to
	user.

iv. View Places of Interest

Preconditions	The user must have an active ac-
	count and their current location
	must be known.
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Naviga-	2. The system displays the Navi-
tion" option	gation page.
3. The user selects the "View	4. The system retrieves a list of
Places of Interest" option.	general places of interest based on
	the user's location.
	5. The system displays the places
	of interest to the user.
Post conditions	Relevant location details shown to
	user.

v. Navigate to Location

Preconditions	The user must have an active ac-
Preconditions	
	count. The users current location
	must be known and the must have
	specified a destination through the
	search interface.
Actor: User	System: Up Nav
	0. The system displays the details
	of a location.
1. The user selects the "Navigate	2. The system displays a list of
to Location" option	navigation preferences for the user
	to enable / disable, namely "Avoid
	Pedestrian Traffic" and "Disability
	Friendly Route".
3. The user selects their desired	4. The system calculates a route
preferences.	based on the user's preferences.
	5. The system marks the calcu-
	lated route on the map and dis-
	plays this map to the user.
	6. UC 1.6 View Pedestrian Traffic
Post conditions	The user is provided with direc-
	tions from their current location to
	their desired destination

vi. View Pedestrian Traffic

Preconditions	Users must all have the NavUP
	app installed and must be regis-
	tered in order for them to show up
	on the heat map. The current user
	must have selected the option to
	navigate to a location
Actor: User	System: Up Nav
	0. The system scans the calculated
	route for other users.
	1. The system displays a heat map
	to indicate the amount of users
	along the selected route.
Post condition	A heat map of the campus is dis-
	played

6.2. Location Sub-System

i. Save Location

Preconditions	The user must be logged in to the
	system.
Actor: User	System: Up Nav
	0. The system displays the details
	of a location which was selected by
	the user
1. The user selects the "Save Lo-	2. The system adds the location to
cation" option.	the "Saved Locations" list.
	3. The system notifies the user
	that the location has been saved.
Post condition	The location will be saved to the
	user's Saved Locations list

ii. View Saved Locations

Preconditions	The user must be logged in
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Manage	2. The system displays the Man-
Locations" option	age Locations page.
3. The user selects the "View	4. The system retrieves a list of all
Saved Locations" option.	the locations previously saved by
	the user.
	5. The system displays a list of
	saved locations.
Post condition	None

iii. View History

Preconditions	The user must be logged in
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Manage	2. The system displays the Man-
Locations" option	age Locations page.
3. The user selects the "View His-	4. The system retrieves a list of all
tory" option.	the locations previously searched
	for by the user.
	5. The system displays a list of the
	user's history.
Post condition	None

iv. Share Location

Preconditions	The user must select the "View
	Current Location" option
Actor: User	System: Up Nav
	0. The system displays the user's
	current location.
1. The user selects the "Share Lo-	2. The system displays a search
cation" option.	bar to search for users.
3. The user enters the user name of	4. The system searches for the user
the user they wish to send a loca-	based on the search term entered
tion to and presses the search but-	by the user.
ton.	
	5. The system displays the search
	results.
6. The user selects the user which	7. The system sends a location to
they would like to share their loca-	the selected user.
tion with.	
Post condition	The current user's location is sent
	to another user.

v. View Most Visited Locations

Preconditions	The user must be logged in
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Manage	1. The system displays the Man-
Locations" option	age Locations page.
3. The user selects the "View Most	3. The system retrieves a list of
Visited Locations" option.	the user's visited locations ordered
	by frequency of navigation.
	5. The system displays the list of
	visited locations to the user.
Post condition	The user's most visited locations
	are displayed

6.3. User Account Management System

i. Create Profile

Preconditions	The user must not exist on the sys-
	tem
Actor: User	System: Up Nav
	0. The system displays Login Page
	with a "Register" option.
1. The user selects the "Register"	2. The system displays a form for
option.	the user to complete their profile.
3. The user fills in their profile de-	4. The system saves the users pro-
tails and selects the save option.	file details and notifies the user
	that their profile has been created.
Post condition	The new user is registered on the
	system

ii. Login

Preconditions	The user must be registered on the
	system
Actor: User	System: Up Nav
	0. The system displays the user's
	Login page.
1. The user enters their username	2. The system verifies the creden-
and password.	tials entered by the user.
	3. The system logs the user in and
	displays the user's home page.
Post condition	The user is logged in to the system

iii. Manage Profile

Preconditions	The user must be logged in
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Manage	2. The system displays the User
Account" option.	Account Management page.
3. The user selects the "Manage	4. The system displays a form
Profile" option.	which is populated by the users
	current profile details.
5a. The user edits their current de-	6a. The system saves the users
tails and selects the save option.	profile details and notifies the user
	that their details have been saved.
5b. The user selects the "Delete	6b The system prompts the user to
Profile" option.	confirm the deletion.
7b The user confirms the deletion.	8b. The system deletes the users
	profile and notifies the user that
	their profile has been deleted.
Post condition	None

iv. Create Timetable

Preconditions	The user must be logged in
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Manage	2. The system displays the User
Account" option.	Account Management page.
3. The user selects the "Create	4. The system displays a timetable

	their timetable has been deleted.
Post condition	The user's timetable is edited or
	deleted

6.4. Entertainment Sub-System

i. View Events

Preconditions	The user must be logged in
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Entertain-	2. The system displays the Enter-
ment" option.	tainment page.
3. The user selects the "View	4. The system retrieves a list of all
Events" option.	scheduled events .
	5. The system displays the list of
	events.
Post condition	A list of all events is displayed to
	the user

ii. Save Event

Preconditions	The user has selected the View
	Events option
Actor: User	System: Up Nav
	0. The system displays the list of
	all scheduled events.
1. The user selects an event from	2. The system displays the details
the list.	of the event selected by the user.
3. The user selects the "Save	4. The system saves the event on
Event" option.	the user's "Upcoming Events" list
	and notifies the user that the event
	has been saved.
Post condition	An event is saved on the user's Up-
	coming Events list

iii. Delete Event

Preconditions	None
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Entertain-	2. The system displays the Enter-
ment" option.	tainment page.
3. The user selects the "Manage	4. The system retrieves a list of all
Events" option.	the user's "Upcoming Events".
5. The user selects an event from	6. The system prompts the user to
their Upcoming Events list that	confirm the deletion.
they wish to delete.	
7. The user confirms the deletion	8. The system removes the event
	from their Upcoming Events list
Post condition	An event is removed from the
	user's Upcoming Event list

6.5. Achievements Subsystem

i. Set Goal

Preconditions	The user must be logged in
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Achieve-	2. The system displays the
ments" option.	Achievements page.
3. The user selects the "Set Goals"	4. The system displays a form with
option.	the fields "Number of Steps" and
	"Deadline" .
5. The user fills in the form and	6. The system saves the user's goal
selects the save option.	and notifies the user that their goal
	has been saved.
Post condition	A new goal is created

ii. View Leader board

Preconditions	The user must be logged in
Actor: User	System: Up Nav
	0. The system displays the user's
	Home page.
1. The user selects the "Achieve-	2. The system displays the
ments" option.	Achievements page.
3. The user selects the "View	4. The system displays the leader
Leader board" option.	board" .
Post condition	The leader board is displayed

iii. Challenge a Friend

Preconditions	The user must be logged in
Actor: User	System: Up Nav
	0. The system displays the user's
	home page.
1. The user selects the "Achieve-	2. The system displays the
ments" option.	Achievements page.
3. The user selects the "Challenge	4. The system displays a form with
a Friend" option.	the fields "Number of Steps" and
	"Deadline" .
5. The user fills in the form and	6. The system displays a search
selects the submit option.	bar.
7. The user enters the username	8. The system searches for the user
of the user they wish to challenge	based on the username provided
and selects the search option	and returns a list of search results.
9. The user selects a user from the	10. The system sends a notifica-
search results.	tion to the selected user informing
	them of the challenge, and the cur-
	rent user is notified that their chal-
	lenge has been issued
Precondition	A challenge is issued to another
	user.

6.6. Administration Sub-System

i. Manage Users

Preconditions	The current user must be an ad-
	ministrator
Actor: Administrator	System: Up Nav
	0. The system displays the Admin-
	istration home page.
1. The administrator selects the	2. The system displays a search
"Manage User" option.	bar.

3.4 Performance Requirements

Not relevant

3.5 Design Constraints

This section describes restrictions on design alternatives regarding standards and limitations of hardware capabilities

1. Storage space

• **Description:** The amount of storage space required by the application must be within the maximum storage limits of a budget phone to accommodate a range of phones typically used by students.

Maximum: 90MBReasonable: 40MBOptimal: 10MB.

2. Memory usage

• **Description:** The amount of RAM used by the application should be a reasonable amount considering that some smartphones only have a capacity of 1GB RAM

Maximum: 150MBReasonable: 90MBOptimal: 40MB.

3.6 Software System Attributes

This section describes all quality related requirements of the software system.

1. Reliability

Description: The system should return results that are trustable and accurate

Minimum: 98% response and accuracy rate
Reasonable: 99% response and accuracy rate
Optimal: 100% response and accuracy rate

2. Security

Description: The system must maintain encryption between system and server so that usernames and passwords remain confidential and database security is not compromised.

Minimum: 100% encryption and security rate
Reasonable: 100% encryption and security rate
Optimal: 100% encryption and security rate

3. Availability

Description: The system must be usable at any given time since it will be used by students during the day and possibly visitors for events during the night.

Minimum: 98% availability rate
Reasonable: 99% availability rate
Optimal: 100% availability rate

4. Interoperability

Description: The system must have the ability to exchange and use data between the application and database effectively.

Minimum: 98% Interoperability rate
Reasonable: 99% Interoperability rate
Optimal: 100% Interoperability rate

3.7 Other Requirements
